# ENERGY SAVIOUR

*Intelligent energy saving on your beer and soft drink coolers*

**Brewfitt**  
EXPERTS IN DISPENSE

**An intelligent App driven, power-saving plug-in device for all beer and soft-drink coolers running from a 13A UK mains supply.**

Features Include:

- Programmable Trading Hours to ensure that the device is **ideally matched** to your trading patterns ensuring perfect dispense during opening hours and maximum energy savings when closed.
- **Advanced Learning Algorithms** continuously adapt the operating parameters of the device to the conditions of a given cellar environment once more ensuring maximum savings.
- Trading Hours **Override allows easy adjustment** of standard trading hours to accommodate special events.
- Cleaning Mode ensures that lines do not freeze during a line-cleaning operation.
- Programmable Python Refresh makes sure that the product within the python is kept at a **safe temperature** whilst the cooler is in energy saving mode.
- The Energy Saviour device is compatible with all coolers which run from a UK 13A mains socket.

## AVAILABLE ON APP STORE & GOOGLE PLAY

To ensure that you maximise your savings, download the simple-to-use, Bluetooth connected App which runs on both Android and iOS platforms to allow easy setup of your Energy Saviour.

By working through a few simple setup steps you can match the operation of the device to the way you run your business.

## SAVINGS EXAMPLES

**Typical savings are 30% to 35% of the normal running costs of your cooler\***

An average cooler consumes around 5,200 kWh of electricity every year. At the current price of 35p per kWh this equates to an annual bill of £1,820. However, if you plug your cooler into a correctly set up Energy Saviour device you can enjoy a typical 30% reduction in energy consumption, which will save you around £546 annually. So, with its retail price of £125 plus VAT, the purchase of an Energy Saviour will typically pay for itself within its first three months of use!

\* savings will vary according to outlet trading hours and customer demand.
